

JUSS JOOSEP HOLDT

Software development student with a strong interest in backend and system-level thinking. I'm most engaged when understanding how applications work under the hood and enjoy designing solutions before implementing them.

Technical Skills

- JavaScript
- React
- Java
- Python
- MySQL | MariaDB
- Node.js

EXPERIENCE

Frontend Development Internship | Disenjador

SELECTED PROJECTS

Finsight | Full-Stack Finance Tracking Application (Team Project)

Team Lead & Backend Developer

- Designed and implemented backend architecture using Node.js and Express, exposing a REST API with clear separation of routing, services, and data access
- Modeled and managed financial data using PostgreSQL with Supabase authentication and row-level security
- Integrated Prisma ORM where compatible, maintaining a consistent repository-style abstraction
- Built a decoupled market data pipeline via a Python service fetching external price data
- Led system design decisions and backend integration between API, database, and frontend

Pace | Mobile Application (React Native / Expo)

Backend Developer

- Implemented user authentication and data storage using Supabase and PostgreSQL
- Contributed to backend-related game logic and user data handling
- Gained experience integrating backend services into a mobile application

Emoji Slot | React Application

- Built an interactive slot machine with weighted randomness, multiple win lines, and configurable game logic
- Managed application state using React Context and Reducer
- Implemented persistent data handling for jackpot values

Independent Technical Exploration

Personal experimentation with data pipelines and AI model training
